

NORTH AMERICA

BEST METAL PROCESSING EQUIPMENT MANUFACTURER
2022 - SICON AMERICA

Founded in 1998 as a planning and consulting office, SICON today offers as a manufacturer and supplier the complete spectrum of scrap and metal processing, ranging from shredding to the separation of all materials according to type. Due to close customer contacts, the SICON team has continuously and consistently developed new and pioneering solutions for our industry. Today, with the EcoShred® series, the EcoScan® Online, the SICON LaserSort, the VW-SICON process and many other products, we are the innovation leader in our industry.

In a world with almost 8 billion people, recycling is one of the greatest global challenges of our time. SICON wants to use their strength and resources to develop new recycling processes and put them into practice in order to achieve the goal of a "circular economy". In doing so, the

company focuses on metals, the only recyclable material that can be recycled infinitely. The scrap and non-ferrous metal industry makes a considerable contribution to solving the global recycling challenge with plants and machinery.

Team SICON is on the road worldwide, with the focus of our activities in Europe and the USA, the company works with local sales partners, who almost without exception has a very long experience in the scrap or steel sector and know how the customers think and what they need.

But SICON also have a network of Manufacturing Points: These are licensed manufacturing partners who have also been working with SICON for the most part since the company was founded and manufacture exclusively for them. As before, more than 75% of SICON Manufacturing stores are

located in the US or German-speaking countries. The others are located in Italy, Eastern Europe and China.

As the operator of an own processing plant (1999-2013), SICON's processes were not developed at the drawing table but tested live – in countless campaigns and multi-shift continuous operations. Today the company operates a Technical Research Center in Hilchenbach, where development and testing work is focused and where SICON offers their customers trials with their own materials.
